English presentation

Linux

The free system that runs the world.

What is it?
An operating system, like Windows or macOS. Its heart is the kernel: the part that talks to the hardware.

1991
Linus Torvalds
starts it as a hobby

Free
Open source
the code is public

500/500
Supercomputers
all run Linux

It's everywhere

Internet servers, Android phones, smart TVs, cars, routers, the Steam Deck and even a NASA helicopter on Mars.

Free · Secure · Customizable · Big community

Distros

Same kernel, many flavours.

Debian	Debian · Ubuntu · Mint	stable, great for beginners
Red Hat	Fedora · RHEL	modern, used by companies
Arch	Arch · Manjaro · CachyOS	fast, always up to date

5 basic commands

`ls`	list files	`cd`	change folder
`pwd`	where am I?	`mkdir`	new folder
`sudo`	admin power		

How does it work?

Like a cake: layers. Your click goes down to the hardware, and the answer comes back up.
